

TARA VALLEY FACT SHEET

Climbing Frangipani

The Climbing Frangipani (*Chonemorpha macrophylla*) is a vigorous tropical climber with large coarse leaves and masses of perfumed white flowers. This vine is grown for its shiny evergreen foliage and stunning scented flowers which resemble that of a frangipani. It's suitable for training over pergolas or trees and can be used to achieve an exotic fragrant garden. The Climbing Frangipani needs lots of space and a strong structure to climb on, and will provide plenty of privacy and shade when grown over objects.

Genus: *Chonemorpha* **Species:** *macrophylla*

Growing: Best in full sun, the Climbing Frangipani is a very vigorous grower.

Soil: The soil must be well drained and rich in organic matter. The Climbing Frangipani prefers acidic soil.

Water: Regular watering is needed during the hotter months. Watering should be reduced slightly during cooler periods, but should still be maintained.

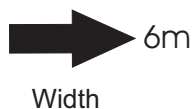

Foliage & Flowering Features: This large-leaved coarse vines has large clusters of fragrant blooms. The flowers have an unusual spiral shape and are a pure white colour with a yellow centre.

Origin: India

Uses: This climber is great for larger structures such as trellises and columns, but is also suitable for training over pergolas and trees for a striking feature. It can be used as a screen for privacy or to create an exotic tropical and fragrant garden.

Maintenance: Prune for size control and to create bushy growth.
